

Optimizing Patient Data Collection

Discovering The
Benefits of Feedback

Engage Patients By Utilizing SentactFeedback

Technology that streamlines the data-gathering process and collects patient and employee feedback has become a prevalent need for hospitals because of the limited resources available. Because of this, hospitals risk a shortage of feedback/data gathered from patients, preventing them from evaluating their practices.

SentactFeedback is able to provide hospitals with patient-dependent feedback functions. The Feedback functionality will work in conjunction with traditional rounding practices, allowing hospitals to better allocate their resources while collecting more patient feedback than before.

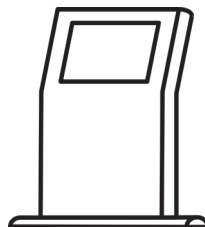

SentactFeedback contains three unique functionalities that can gather information without constraining staff services. This information can then be analyzed by staff at their earliest convenience.
